

Diaphragm Vacuum Pump VC2C

Chemistry-design diaphragm pumps are an excellent solution for continuous, oil-free pumping of corrosive gases and vapors. Chemically resistant eco-friendly diaphragm pumps are resistant to aggressive solvents and acidic vapors. The two-stage construction provides the advantageous combination of high pumping speed and low ultimate vacuum. The diaphragms and gas contacting parts consist of PTFE, PTFE Compounds, and ceramic compounds. Well-proven PTFE sandwich diaphragms are used for increased reliability and extended operating life. The vacuum processes run more effective and is reproducible. The additional pressure reduction allows the distillation of gas mixtures almost automatically and without fractionated operation. This pump is our first and most popular chemistry diaphragm pump, and is the heart of Analytical pumping systems. The new indigenous pump features further improved performance data and superior vapor tolerance
