Electrochemical methods/Techniques (Model s' comparison)

Guidance:

Hardware specs and appearance are the same for various models, difference is in softwarepart.

Model CS3350 (with built-in EIS) is the most comprehensive model, includes all methods incl. EIS. It'ssuitable for various applications, and also for teaching

Model CS3310 (with built-in EIS) also includes EIS module. But it has less voltammetry methods compared with CS3350. CS3310 is a cost-effective model if you need EIS. It's an ideal model forcorrosion, battery studies etc.

Model CS3300 (w/o EIS) includes all the voltammetry methods but EIS, usually used in heavy metalions detecting etc.

Model CS3150 (w/o EIS) is the basic modelincl. basic methods such as CV, LSV, charge anddischarge, Tafel plot, etc

Model CS3120 is the simplest model with only potentiostat function without galvanostat. If peopleonly use Cyclic voltammetry (CV) in their experiment, CS120 will be a choice.

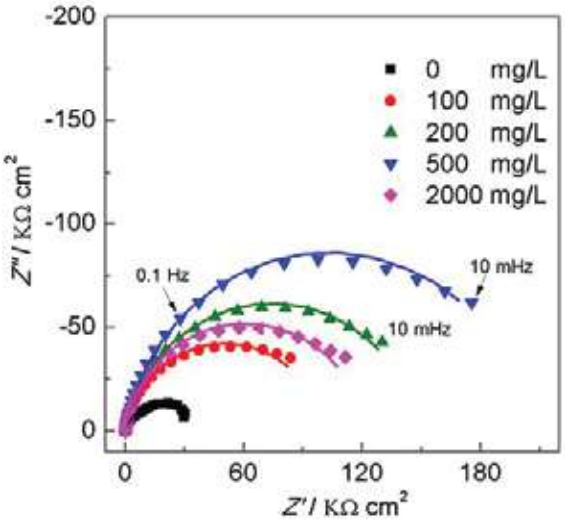
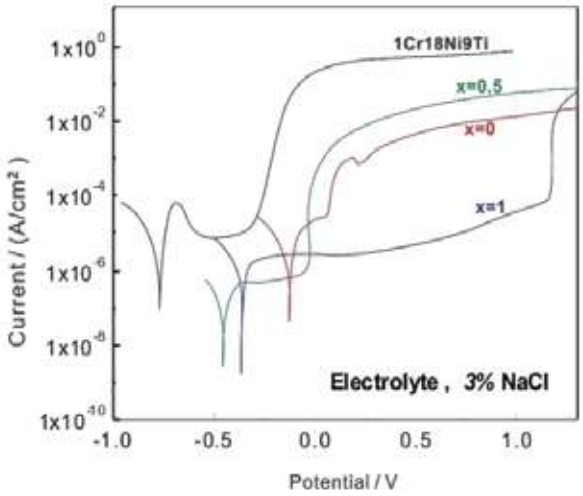
Technical advantages

1. Impedance (EIS)

CS350potentiostat applies correlation integral algorithm and dual-channel over-samplingtechnique, and has strong anti-interference ability. It is suitable for EIS measurementsof high-impedance system (>10 9Ω, such as coating, concrete etc.)



EIS of AA6063 Al alloy in Ce 3+ containing 3% NaCl solution



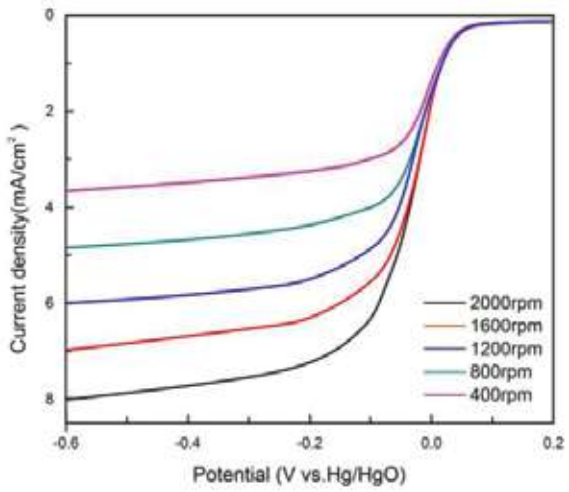
Polarization curve of Ti-based amorphous alloy & stainless steel in 3%NaCl solution

2. Polarization curve

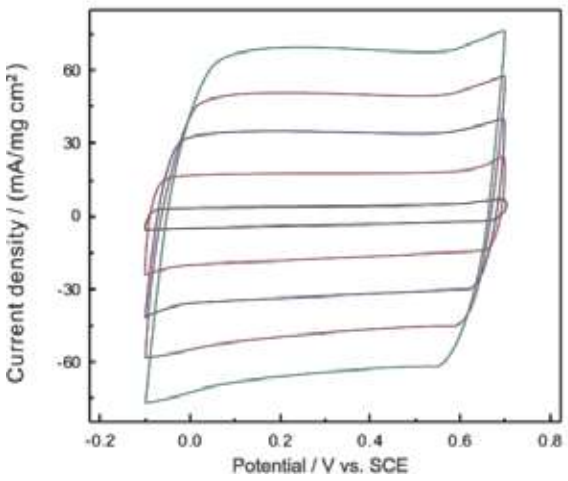
Tafel plot can be obtained. The user can set the anodic reversal current (passivationfilmbreakdown current) of the cyclic polarization curve to obtain material's pitting potential andprotection potential and evaluate the its susceptibility to intergranular corrosion. The softwareusesnon-linear fitting to analyze polarization curve, and can make fast evaluation of material'santi-corrosion ability and inhibitors.

3. Voltammetry

Linear Sweep Voltammetry (LSV), Cyclic Voltammetry (CV), SCV, SWV, DPV, NPV, ACV, Strippingvoltammetry etc. It integrates calculation of peak area, peak current and standard curve analysis.



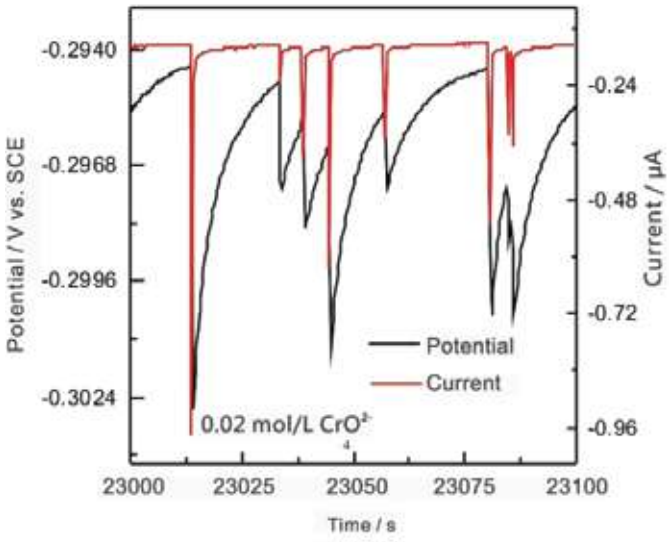
LSV: mesoporous carbon material in 0.1M KOH



CV of PPy supercapacitor in 0.5 mol/L H_2SO_4

4. Electrochemical Noise

With high-resistance follower and zero-resistance ammeter, it measures the natural potential/current fluctuations in corrosion system. It can be used to study pitting corrosion, galvanic corrosion, crevice corrosion, and stress corrosion cracking etc. Based on calculation of noise resistance and pitting index, it can complete localized corrosion monitoring.



Electrochemical noise of low-carbon steel in 0.05mol/L Cl^-+0.1mol/L $NaHCO_3$

5. Full floating measurement

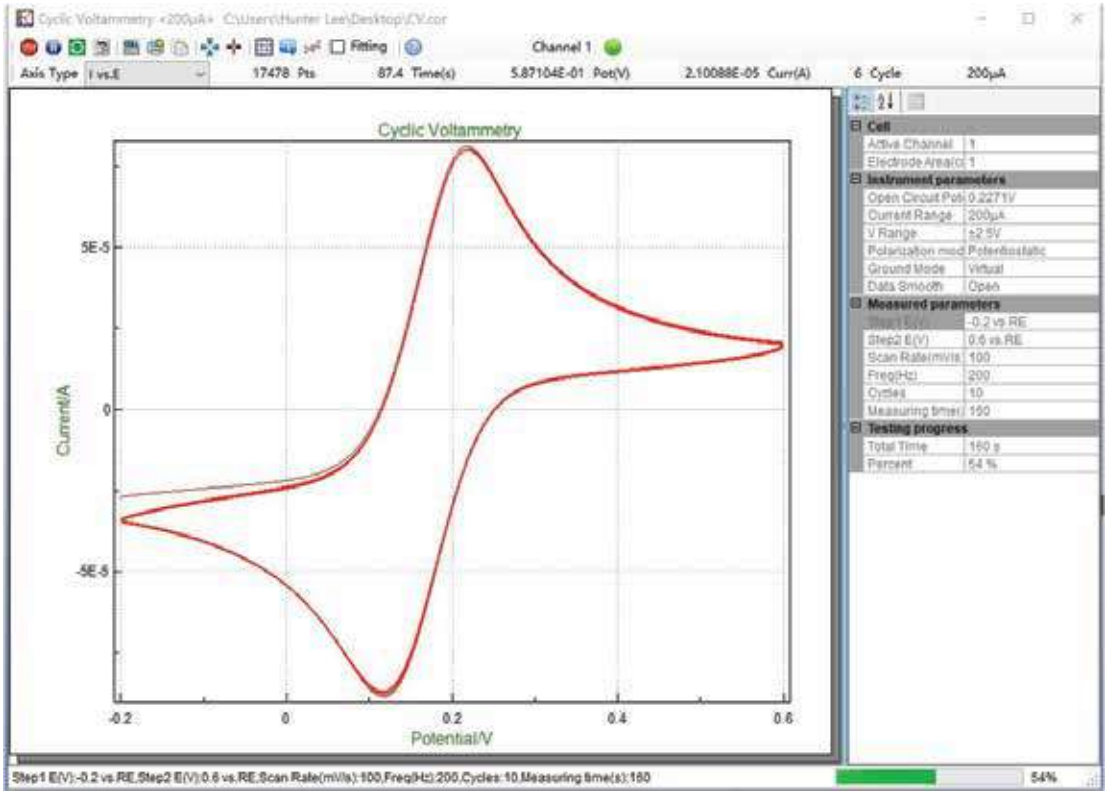
Full-floating mode be used for autoclave electrochemical measurements, on-line corrosion monitoring of metallic components under the ground (rebar in concrete, etc.)

6. User-defined methods

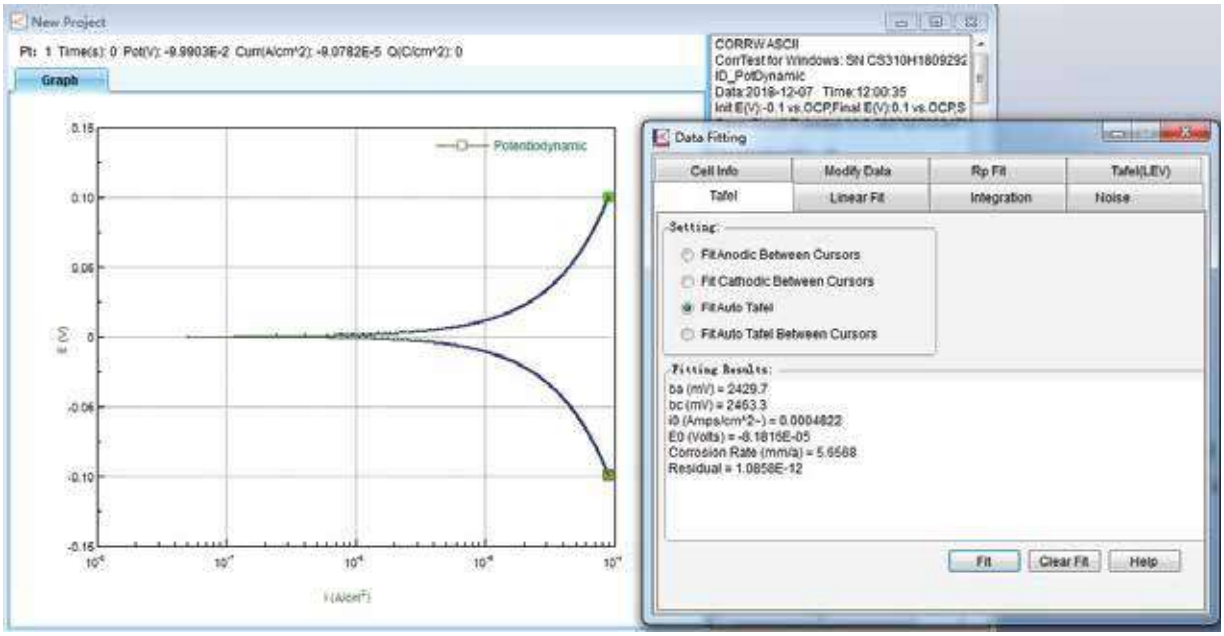
We are able to provide API functions and development examples, which facilitates someusers' requirements for secondary development and self-defined measurements.

Software Features

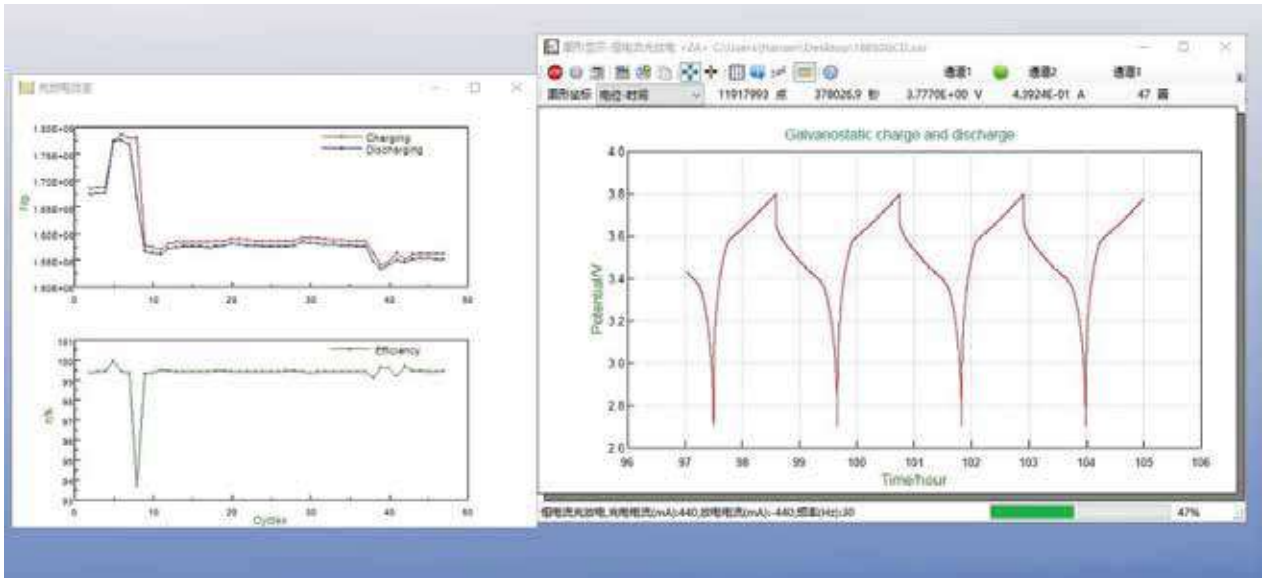
Cyclic voltammetry: CS studio software provides users a versatile smoothing/differential/integration kit, which can complete the calculation of peak height, peak area and peak potential of CV curves. In CV, during the data analysis, there is function of selecting exact cycle(s) toshow. Youcan choose to see a cycle or some cycles as you want.



Tafel and corrosion rate: CS studio also provides powerful non-linear fitting on Butler-Volmerequation of polarization curve. It can calculate Tafel slope, corrosion current density, limitationcurrent, polarization resistance, corrosion rate. It can also calculate the power spectrumdensity, noiseresistance and noise spectrum resistance based on the electrochemical noise measurements.

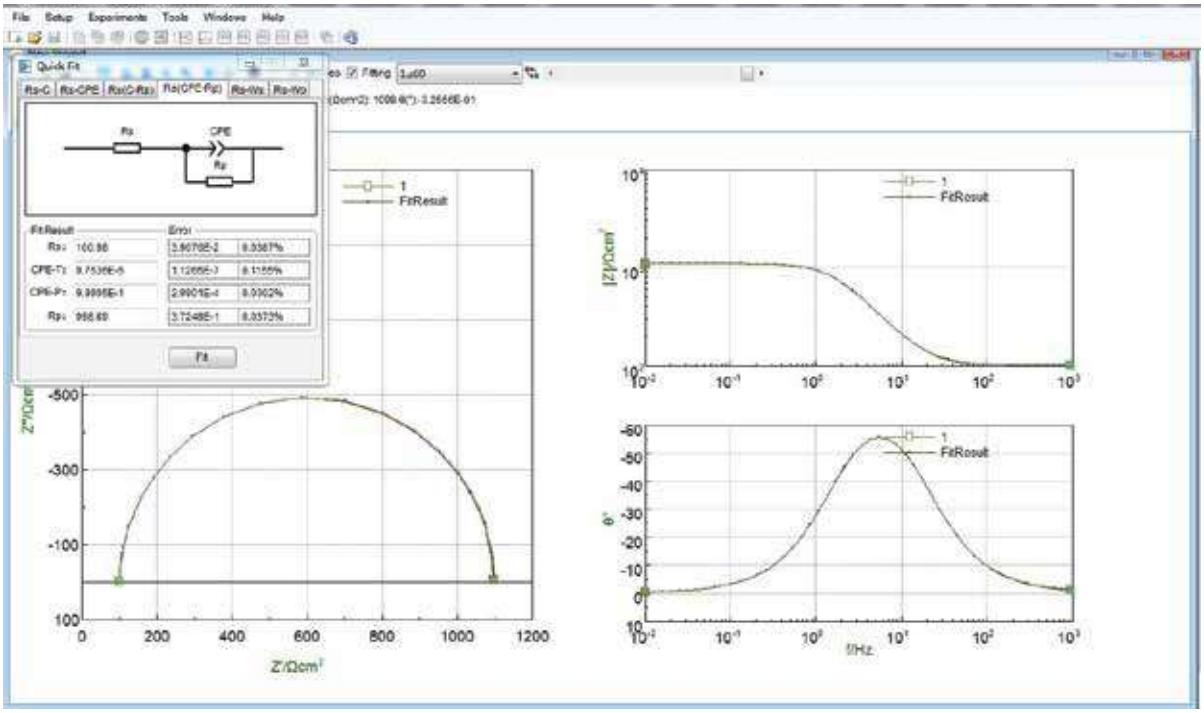


Battery test and analysis: charge & discharge efficiency, capacity, specific capacitance, charge&discharge energy.

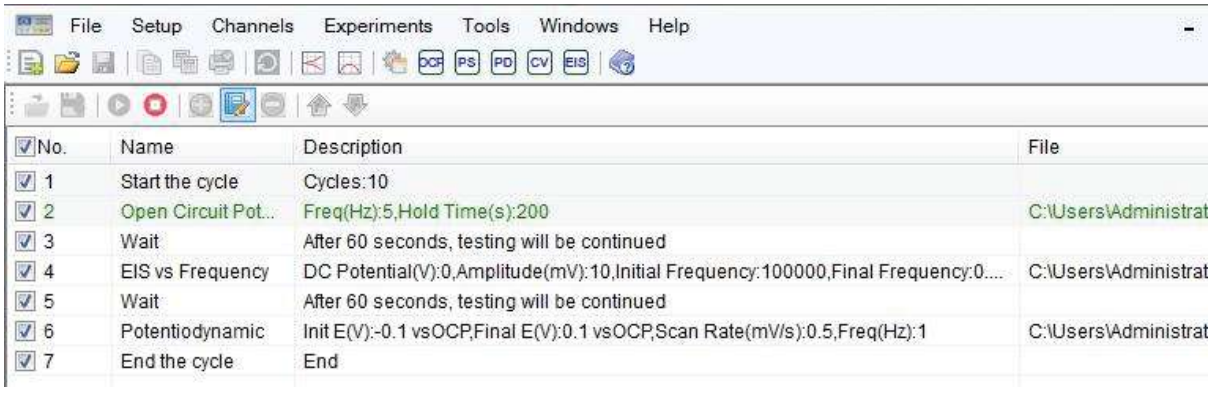


EIS analysis: Bode, Nyquist, Mott-Schottky (M-S) plot

During EIS data analysis, there is built-in fitting function to draw the custom equivalent circuit. Firstly, draw the equivalent circuit, use the “Quick Fit” to obtain the parameters’ value, and then substitutethe value into the equivalent circuit.



Real-time saving of the data: the data can be automatically saved even in case of suddenpoweroff.Combined measurements: It facilitates the automation of experiments and save time. Youcanchoose several techniques, and set the wait time, the start time, and the cycles. Choosetheexperiments you want to run, then you can make auto measurement of the set experiments as youwant without having to wait in the lab.



Data open: You can open the data files directly by notepad. Data can also be opened in Origin
