## ►► **Product Introduction**

Fluorescenceimmunoassay (FIA) technology has advantages of high specificity, sensitivity and utility. Therefore, it is used for detecting biological active compounds of low concentration, such as protein nucleic acid, hormone (steroid, thyroid hormones), medicine and microorganism.

FS 2060 is based on Fluorescenceimmunoassay to detect the luminous intensity of fluorescent reagent in immunoassay (IA). Under the condition of low concentration, the sample concentration is linear to fluorescence intensity. Thus, the testing sample can be analyzed in qualitative and quantitative analysis.

## ►► **Fluorescenceimmunoassay technical background**

Our nano series Micro-Spectrophotometer measure the concentration and purity of the sample, because it is able to measure the absorbance of the whole ingredient (such as DNA, RNA, oligos and so on) of the sample at 260nm, that may make the read inaccuracy. While the fluorometer measure the fluorescence intensity of the fluorescent reagent which combine with the target molecule to read the concentration of sample. Generally, the read is lower than Nano series products but much accuracy than it

The sensitivity of Nano series products are above 5ng/ul, and while the FS 2060 0.5pg/ul in measuring DNA concentration. It is important and necessary for the most applications to read the lower and accuracy concentration of the sample. Using the FS 2060 with the quantitation kit can measure the sample concentration rapidly, sensitively and accurately

## ►► **FS 2060 Simple, easy to use and applications**

The FS 2060 is a dual-channel system, it provides high-sensitive fluorescent detection when quantifying nucleic acids and proteins, simple and cost to operate Applications:

1. The sample is scarce and difficult in processing
2. The low quantity of DNA, RNA, or protein after extraction
3. The sample will be used in the expensive experiments:  
qPCR, PCR cloning, transfection, the next generation sequencing and etc.

## ►► FS 2060 Highlights

1. Simple – 4.3 inch touch screen, small and easy to use
2. Easy measurement within 3 sec for DNA, RNA, and protein
3. High sensitivity – Lowest DNA detection limit is 0.5pg/ul
4. Two optical channels – Equipped with two fluorescence channels for nucleic acid, protein quantitation in one detection
5. Linear Dynamic Range--Five orders of magnitude.
6. Opening system--You can match the instrument with the reagent you choose
7. It can save at most 1,000 data and output data by USB port
8. Adapter: 0.5ml qPCR tube adapter  
0.2ml qPCR tube adapter
