HSS-3009A is a new generation headspace sampler which provides with unique technical features and independent intellectual rights.

Headspace sampling can significantly reduce the process of complicated and time-consuming artificial preliminary treatment to volatile compounds in liquefied and solid samples. Therefore, it is extensively used to detect volatile organisms (detection of residual solvents) in samples for petrochemical, fine chemical, food brewing and food packaging materials, environmental monitoring (water in rivers and lakes), sewage, medicolegal expertise, drinking water, cosmetics, coat and paint.

►► **Features:**

- High versatility---Can be connected with any GC instruments, and also easy operation.
- Oven capacity: Air ventilated oven with 12-seat electrically-driven carousel
- Exquisite design---This instrument features in delicate and exquisite design, which is precise and natural in appearance.
- High economy and durability---As manifested by long-term test, this Instrument is stable and durable
- Low residual adsorption---The complete pipeline is made of inert materials, heating is properly preserved.
