**A digital alcohol hydrometer for on-site spirits measurement with outstanding accuracy.**

AM 3051 measures sugar-free distilled spirits at all alcohol strengths – from pure distilled spirits to spirits at drinkable strength – within 30 seconds.

Only two milliliters of sample are taken from the storage tank and measured with an accuracy of 0.1 %v/v directly on-site. The sample name is automatically identified via RFID, and a measurement is started via gesture control. Just read the results in %v/v or °Proof from the large color display, store them, and send them to a PC via Bluetooth®. Results are already compensated for the temperature influence (reference temperature 60 °F, 20 °C and now also 15 °C).

AM 3051 is ready for left- and right-handed use and is operated via capacitive keys. The newly designed metal bracket ensures a stable, balanced positioning of the instrument on the sample container. A new, improved adjustment routine enhances the reliability of results even at low measuring temperatures and alcohol concentrations.
